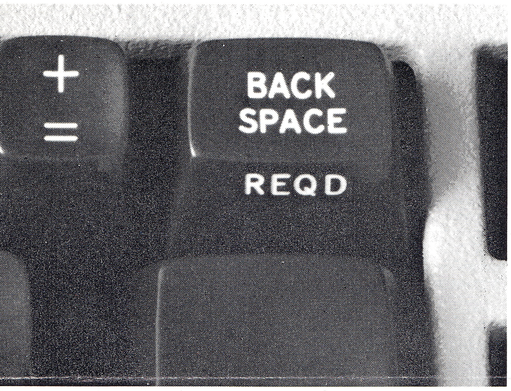
Memory 100
Typewriter

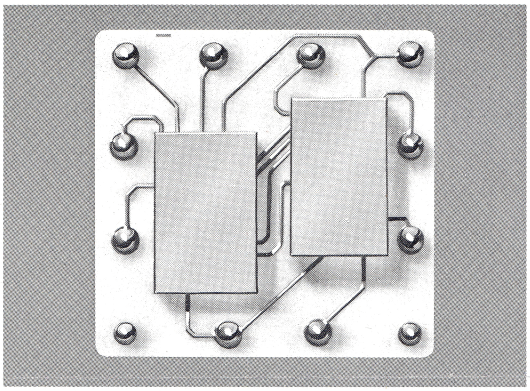
FACTORY REFURBISHED BY IBM

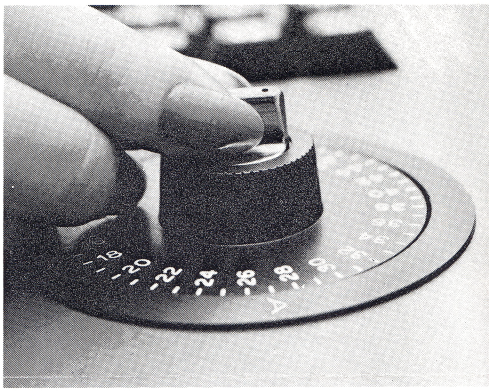
The IBM Memory 100 Typewriter

The IBM Memory 100 Typewriter gives you first-time final originals. Automatic formatting. Simplified statistical typing. Revision from memory. And frequently used documents from storage. All in one versatile desktop typewriter.

FACTORY REFURBISHED BY IBM







More capabilities for more of your typing needs

The IBM Memory 100 Typewriter offers a new level of productivity for the major typing needs in your office. It combines three proven technologies—the IBM correction capability, electronic memory, and an electronic storage system—all in one versatile desktop typewriter that gives your secretary more typing power. For everyday correspondence. Statistical table typing. Forms typing. List updates. Altered text. Frequently typed correspondence. The full range of typing chores performed in your office.

Copy correction capability speeds original typing

With the IBM Memory 100 Typewriter, your secretary can now type all your everyday letters, memos, forms and lists efficiently at fast rough draft speed, and still produce a signature-quality typed page the first time. Minor errors, such as misspelled words or missing characters can be easily corrected. When a mistake is made, your secretary simply backspaces and the error is lifted off the page. Corrected errors on the original page are virtually undetectable.

4,000-character memory simplifies complex typing tasks and revision

Everything typed on the typewriter is also captured in a 4,000-character working memory. The memory is what makes the typewriter so productive. It sets margins and tabs, centers, underscores and indents automatically. It automatically aligns columns of figures at decimal points, simplifying the typing of complex charts, tables and other statistical material. And, with electronic memory, your secretary can now make revisions to documents with a minimum of effort. After an original draft is typed into memory, it can be held indefinitely in the typewriter's electronic storage file until author changes are complete. To make a correction, an addition or deletion, the information is simply recalled to memory with the push of a button. Your secretary then electronically advances to the point of change and makes the necessary revisions. The memory automatically plays back a letter-perfect original incorporating all the changes.

100-page storage to eliminate repetitive typing

The IBM Memory 100 Typewriter has a built-in storage file that allows your secretary to store more than 100 pages of typed material in the typewriter itself. Rough drafts can be held for revision and proofreading. Standard letters, documents and forms can be stored and played out as needed—your secretary need only add variable information such as names and addresses. You can maintain lists, updating them electronically. You can assemble entire documents, too, from standard sentences and paragraphs. You'll find that the savings in typing time can mean a new level of efficiency for your entire office. A 50-page IBM Memory Typewriter is available for offices requiring less storage capacity.

IBM External Pluggable Loops permit unlimited storage capacity

Multiple pluggable tape loops—capable of storing 50 or 100 pages each—can increase storage capacities of the IBM Memory Typewriters. Housed separately and attached by cable, they easily disconnect for filing, storage of confidential data or moving from typewriter to typewriter to balance work loads.

Your IBM Memory Typewriter can be easily modified, right in your office, to accept pluggable loops.

Dual pitch—like having two typewriters in one

Interchangeable elements and a flick of a lever make it possible to switch between 10-pitch (10 characters per inch) and 12-pitch (12 characters per inch) in seconds. 10-pitch is ideal for correspondence and where you want large, impressive, easy-to-read results. 12-pitch is useful for forms, reports, long text, detailed information, or where space is at a premium.

Standard features

- Automatic decimal tabulation
- Acoustical filter hood
- Automatic end-of-ribbon shutoff
- Automatic paragraph indent (14 levels)
- Automatic word underscore
- Page-end indicator
- Automatic centering
- Electronic right margin and tabs
- Interchangeability of type style elements
- IBM Selective Ribbon System
